Most of the assessments in the Apptrepreneur course need to be submitted via GitHub. Assessments need to be submitted in a very specific way in order to be graded . But don't worry, we are here to guide you and help you out if you make any mistakes. The guide below will help you through the submission process.

1. First of all, make sure you go through the GitHub lessons. They'll get you comfortable with using the GitHub platform.

2. Next you'll need to create your very own GitHub account. You can do that here: http://github.com/

3. PLEASE USE THE SAME EMAIL ADDRESS AS YOUR IT VARSITY ACCOUNT!

4. Once your account has been created, open up assessment 1 in module 1 and follow the instructions there to send us a link to your new GitHub profile.

Follow these steps to submit your assessments:

1. Log into your GitHub account and find your organization. It's very important that all your assessment be uploaded directly into your organization. Your organization name will be the same as the first portion of your email address.

2. Create a GitHub repository for you assessment. The repo needs to have a very specific name depending on the assessment. The name can be found in the instructions for each assessment. Double and triple check if the name is correct.

3. Using GitHub for desktop, clone the repo you created onto your computer.

4. Next, copy all your project files into your repo folder and commit the files. Be extra careful to commit to the correct repo.

5. Enable GitHub pages on your project.

6. Finally, submit the link to your repo and the link to the GitHub pages for your repo into the space provided below in the assessment page
